1 Safety Instruction

Please read the following safety notices before installing or using this unit. They are crucial for the safe and reliable operation of the device.

- Please use the external power supply that is included in the package. Other power supply may cause damage to the phone and affect the behavior or induce noise.
- Before using the external power supply in the package, please check the home power voltage. Inaccurate power voltage may cause fire and damage.
- Please do not damage the power cord. If power cord or plug is impaired, do not use it because it may cause fire or electric shock.
- Do not drop, knock or shake the phone. Rough handling can break internal circuit boards.
- This phone is designed for indoor use. Do not install the device in places where there is direct sunlight. Also do not put the device on carpets or cushions. It may cause fire or breakdown.
- Avoid exposure the phone to high temperature or below $0\Box$ or high humidity.
- Avoid wetting the unit with any liquid.
- Do not attempt to open it. Non-expert handling of the device could damage it. Consult your authorized dealer for help, or else it may cause fire, electric shock and breakdown.
- Do not use harsh chemicals, cleaning solvents, or strong detergents to clean it. Wipe it with a soft cloth that has been slightly dampened in a mild soap and water solution.
- When lightning, do not touch power plug, it may cause an electric shock.
- Do not install this phone in an ill-ventilated place. You are in a situation that could cause bodily injury.
 Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents.

2 Overview

2.1 Overview

XonTel XT-08P are a kind of telephones designed for small and medium-sized enterprises and families. It's greatly improve enterprise production efficiency with advanced design, high cost performance, paperless office tool. It is not only a desktop phone, but also an elegant article that puts in the sitting room or office.

The device is the latest generation of IP Phone, which supports many excellent features, such as highdefinition voice, headphones and high-performance echo cancellation full duplex speaker, fast ethernet, QoS, encryption transmission, automatic configuration, new system, smooth operation, flat interface settings and many other advantages.

For enterprise users, it's the cost-effective office equipment, while realizing environmental protection, they also provide convenient operation. For family users, it's the highly efficient communication device. Users can flexibly configure and define the functions of two DSS keys, space saving and cost. It will be an ideal choice for enterprise users and family users who pursue the high quality and high efficiency.

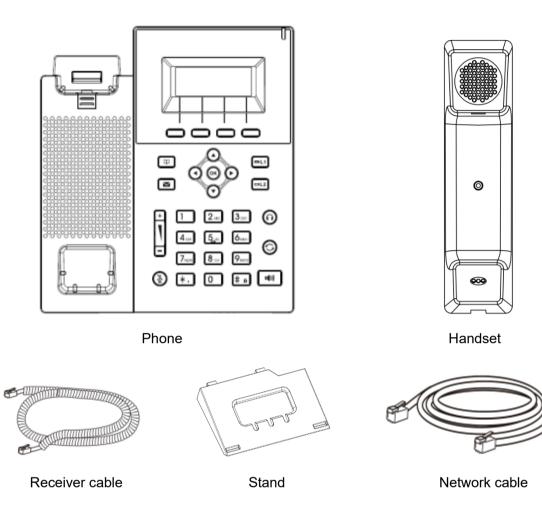

In order to help some interested users better understand the details of the product, this user manual can be used as a reference guide for the use of XT-08P. This document may not be applicable to the latest version of the software. If you have any questions, you can use the help prompt interface of the device phone, or download and update your user manual from the official website.

Kuwait Tel.: 1880005 Fax: 22413877

KSA Tel.: 920007622 Fax: 011-4700403

3 Desktop Installation

3.1 PoE and the use of external power adapters

XT-08PP support two power supply modes from external power adapter or over Ethernet (PoE) complied switch. The XT-08P does not support Poe function.

PoE power supply saves the space and cost of providing the device additional power outlet. With a PoE switch, the device can be powered through a single Ethernet cable which is also used for data transmission. By attaching UPS system to PoE switch, the device can keep working at power outage just like traditional PSTN telephone which is powered by the telephone line.

For users who do not have PoE equipment, the traditional power adaptor should be used. If the device is connected to a PoE switch and power adapter at the same time, the power adapter will be used in priority and will switch to PoE power supply once it fails.

Use standard power adapters and PoE conforming to specifications to ensure proper operation of equipment.

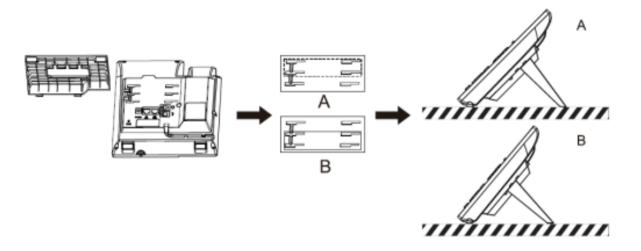

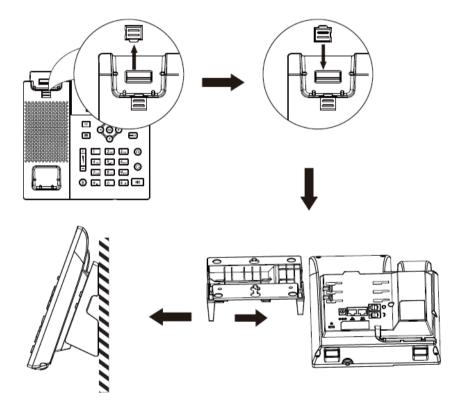

3.2 Desktop and wall mounted method

The device supports two installation modes, desktop and wall mounted. If the phone is on the desktop, please follow the instructions in the picture below to install the phone.

Picture 1 - Desktop installation

If the phone is mounted on the wall, please follow the instructions below to install it.

Picture 2 - Wall-mounted installation

		burng a can, the user can press this key to mute the microphone.		
		The 12 standard telephone keys provide the same function as		
8	Standard Telephone	standard telephones, but further to the standard function, some		
	Keys	keys also provide special function by long-pressing the key,		
		Key $\#$ - Long-pressed to lock the phone.		
(9)	Headset Key	Users can press this key to open the headset channel		
10	Redial	Press the Redial key to redial the last number dialed		
(11)	Hands-free Key	The user can press this key to open the speakerphone.		

5.2 Using Handset / Hands-free Speaker / Headphone

Using Handset

To talk over handset, user should lift the handset off the device and dial the number, or dial the number first, then lift the handset and the number will be dialed. User can switch audio channel to handset by lifting the handset when audio channel is turned on in speaker or headphone.

Using Hands-free Speaker

To talk over hands-free speaker, user should press the hands-free button then dial the number, or dial the number first then press the hands-free button. User can switch audio channel to the speaker from handset by pressing the hands-free button when audio channel is opened in handset.

Using Headphone

To use headphone, by default, user should headset button which is defined by DSS key to turn on the headphone. Same as handset and hands-free speaker, user can dial the number before or after the headphone is turned on.

Using Line Keys (Defined by DSS Key)

User can use line key to make or answer a call on specific line. If handset has been lifted, the audio channel will be opened in handset. Otherwise, the audio channel will be opened in hands-free speaker or headphone.

www.xontel.com

5.3 Idle Screen

Picture 5 - Screen layout/default home screen

The image above shows the default standby screen, which is the user interface most of the time. The upper half of the home screen shows the status of the device, information and data that can be edited (such as voice messages, missed calls, auto answer, do not disturb, lock status, network connection status, etc.).

The lower half of the area are the function menu keys, which are also the first layer of function menu keys, through which users can operate the phone.

Users can restore the phone to the default standby screen interface by picking up and dropping the handle. The left and right part of the area shows default configuration of Side keys, which dynamically display the configuration of SIP information, message, headset, etc., which can be customized by users.

In some screens, there are many items or long text to be displayed which could not fit into the screen. They will be arranged in a list or multiple lines with a scroll bar. If the user sees a scroll bar, he can use up/down navigator buttons to scroll the list. By long-pressed the navigator keys, user can scroll the list or items in a faster speed.

Picture 9 - Landing page

Users must correctly enter the user name and password to log in to the web page. The default user name is "**admin**" and password are "**xontel**". For the specific details of the operation page, please refer to page

5.6 Network Configurations

The device relies on IP network connection to provide service. Unlike traditional phone system based on a circuit switched wire technology, IP devices are connected to each other over the network and exchange data in packet basis based on the devices' IP address.

To enable this phone, you must first correctly configure the network configuration. To configure the network, users need to find the phone function menu button [Menu] >> [Advanced Settings] >> [Network] >> [Network]

[Network].

The default password for advanced Settings is "123".

NOTICE! If user saw a ²⁴ 'WAN Disconnected' icon flashing in the middle of screen, it means the network cable was not correctly connected to the device's network port. Please check the cable is connected correctly to the device and to the network switch, router, or modem.

The device supports three types of networks, IPv4/IPv6/IPv4&IPv6

There are three common IP configuration modes about IPv4

- Dynamic Host Configuration Protocol (DHCP) This is the automatic configuration mode by getting network configurations from a DHCP server. Users don't need to configure any parameters manually. All configuration parameters will be getting from DHCP server and applied to the device. This is recommended for the most users.
- Static IP Configuration This option allows user to configure each IP parameters manually, including IP Address, Subnet Mask, Default Gateway, and DNS servers. This is usually used in a technical environment of network users.
- PPPoE This option is often used by users who connect the device to a broadband modem or router. To
 establish a PPPoE connection, user should configure username and password provided by the service
 provider.

The device is default configured in DHCP mode.

There are three common IP configuration modes about IPv6

- DHCP This is the automatic configuration mode by getting network configurations from a DHCP server. Users need not to configure any parameters manually. All configuration parameters will be getting from DHCP server and applied to the device. This is recommended for most users.
- Static IP configuration this option allows users to manually configure each IP parameter, including IP address, mask, gateway, and primary and secondary domains. This usually applies to some professional network user environments.

KSA Tel.: 920007622 Fax: 011-4700403

5.7 SIP Configurations

A line must be configured properly to be able to provide telephony service. The line configuration is like a virtualized SIM card on a mobile phone which stores the service provider and the account information used for registration and authentication. When the device is applied with the configuration, it will register the device to the service provider with the server's address and user's authentication as stored in the configurations. The user can conduct line configuration on the interface of the phone or the webpage, and input the corresponding information at the registered address, registered user name, registered password and SIP user and registered port respectively, which are provided by the SIP server administrator.

Phone interface: To manually configure a line, the user can press the line key for a long time, or press the button in the function menu [Menu] >> [Advanced Settings] >> [Accounts] >> [Line n] configuration, click ok to save the configuration.

NOTICE! User must enter correct PIN code to be able to advanced settings to edit line configuration. (The default PIN is 123)

The parameters and screens are listed in below pictures.

Picture 10 - Phone line SIP address and account information

• WEB interface: After logging into the phone page, enter [Line] >> [SIP] and select SIP for configuration, click apply to complete registration after configuration, as shown below:

6 Basic Function

6.1 Making Phone Calls

Default Line

The device provides twenty line services. If both lines are configured, user can make or receive phone calls on either line. If default line is configured by user, there will be a default line to be used for making outgoing call which is indicated on the top left corner. To change the default line, user can press left/right navigator buttons to switch between two lines. Enable or disable default line, user can press [Menu] >> [Features] >> [General] >> [Default Line] or configure from Web Interface (Web / PHONE / Features / Basic Settings).

Picture 12 - Default line

Dialing Methods

User can dial a number by,

- Entering the number directly
- Selecting a phone number from phonebook contacts
- Selecting a phone number from cloud phonebook contacts
- Selecting a phone number from call logs
- Redialing the last dialed number

Dialing Number then Opening Audio

To make a phone call, user can firstly dial a number by one of the above methods. When the dialed number is completed, user can press [**Dial**] button on the soft-menu, or press hand-free button to turn on the speaker or headphone, or lift the handset to call out with the current line, or user can press line key(Configured by DSS Keys) to call out with specified line.

Picture 13 - Enable voice channel dialing

Opening Audio Then Dialing the Number

Another alternative is the traditional way to firstly open the audio channel by lifting the handset, then turn on the hands-free speaker or headphone by pressing hands-free button, or line key, and then dial the number with one of the above methods. When completing the number dial, user can press [**Dial**] button or [**OK**] button to call out, or the number can also be dialed out automatically after timeout.

Picture 14 - Open the voice channel and dial the number

Kuwait

n	

Cancel Call

While calling the number, user can stop the audio channel by putting back the handset or pressing the handsfree button to drop the call.

Picture 15 - Call number

6.2 Answering Calls

When there is an incoming call while the device is idle, user will see the following incoming call on the screen.

Picture 16 - Answering calls

User can answer the call by lifting the handset, open headphone or speaker phone by pressing the handsfree button, or the [Answer] button. To divert the incoming call, user should press [Divert] button. To reject the incoming call, user should press [Reject] button.

6.2.1 Talking

When the call is connected, user will see a talking mode screen as the following figure.

Picture 17 - Talking interface

Table 7 - Talking mode

Number	Name	Description
	Voice channel	The icon shows the voice channel mode being used.
	Default line	The line currently used by the phone.
	Calls to end	The name or number of the person on the other end of the call.
	Call duration	The duration of a call after it has been established.
	Numbers of line	Shows how many calls are present on the current device
	Speech quality	Displays the current voice quality of the call.

6.2.2 Make / Receive Second Call

The device can support up to two concurrent calls. When there is already a call established, user can still answer another incoming call on either lines or make a second call on either lines.

Second Incoming Call

When there is another incoming call during talking a phone call, this call will be waiting for user to answer. User will see the call message in the middle of current screen. The device will not be ringing but playing call waiting tone in the audio channel of the current call and the LED will be flashing in green. User can accept or

Kuwait

reject the call as same as normal incoming call. When the waiting call is answered, the first call will be held on automatically.

Picture 18 - The second call interface

Second Outgoing Call

To make a second call, user may press [Xfer] / [Conf] button to make a new call on the default line or press the line key to make new call on specific line. Then dial the number the same way as making a phone call. Another alternative for making second call is to press DSS Keys or dial out from the configured Keys (BLF/Speed Dial). When the user is making a second call with the above methods, the first call could be held on manually or will be held on automatically at second dial.

Switching between Two Calls

When there are two calls established, user will see a dual calls screen as the following picture.

Picture 19 - Two way calling

User can press up/down navigator buttons to switch screen page, and switch call focus by pressing [Resume] button.

Ending One Call

User may hang up the current talking call by closing the audio channel or press [End] button. The device will return to single call mode in holding state.

6.3 End of the Call

After the user finishes the call, the user can put the handle back on the phone, press the hands-free button or Softkey [End] key to close the voice channel and end the call.

Note! When the phone is in the reserved state, the user must press the [Resume] key to return to the call state, or put the receiver back and press the hands-free button to end the call.

6.4 Redial

- Redial the last outgoing number: When the phone is in standby mode, press the redial button and the phone will call out the last outgoing number.
- Call out any number with the redial key: Enter the number, press the redial key, and the phone will call out the number on the dial.
- Press the redial key to enter the call record: Log in the phone page, enter [Phone Settings] >> [Features] >> [Redial Settings], check Redial to enter the call record page, press the redial button when standby to enter the call record page, and press

Kuwait

6.5 Auto-Answering

User may turn on the auto-answering mode on the device and any incoming call will be automatically answered (not including call waiting). The auto-answering can be enabled on line basis.

The user can start the automatic answer function in the telephone interface or the webpage interface.

• Phone interface:

Press [Menu] >> [Features] >> [Auto Answer] button;

Press the button to select the line, use the left/right navigation key to turn on/off the auto answer option, and set the auto answer time to 5 seconds by default.

After completion, press [OK] key to save;

The icon in the upper right corner of the screen¹¹ indicates that auto answer is enabled.

6.7 Mute

You can turn on mute mode during a call and turn off the microphone so that the local voice is not heard. Normally, mute mode is automatically turned off at the end of a call. You can also turn on mute on any screen (such as the free screen) and mute the ringtone automatically when there is an incoming call. Mute mode can be turned on in all call modes (handles, headphones or hands-free).

6.7.1 Mute the Call

During the conversation, press the mute button on the phone: Ψ the mute button on the phone will turn on the red light.

Red mute icon is displayed in the call interface, as shown in the figure:

Picture 26 - Mute the call

Cancel mute: press 🦞 cancel mute on the phone again. The mute icon is no longer displayed in the call screen. The red light is off by mute button.

6.7.2 **Ringing Mute**

Mute: press the mute button when the phone is in standby mode: Ψ The top right corner of the phone shows the bell mute icon 📫 , Mute button red light is always on, when there is an incoming call, the phone will display the incoming call interface but will not ring.

Picture 27 - Ringing mute

Cancel ring tone mute: On the standby or incoming call screen, press the mute button again $\frac{1}{2}$ or volume up 🕩 cancel ring tone mute, no longer shows mute icon in upper right corner after cancel .The phone mute icon is off.

6.8 Call Hold/Resume

The user can press the [Hold] button to maintain the current call, and this button will become the [Resume] button, and the user can press the "resume" button to restore the call.

Picture 28 - Call hold interface

6.9 **DND**

User may enable Do-Not-Disturb (DND) feature on the device to reject incoming calls (including call waiting).

Kuwait

www.xontel.com

KSA Tel.: 1880005 Fax: 22413877 Tel.: 920007622 Fax: 011-4700403

The DND can be enabled on line basis.

Enable/Disable phone all lines DND, the methods as the following :

- Phone interface: Default standby mode ,
 - 1) Press [DND] button to enter the DND setting interface, select line or phone to enable DND.
 - 2) Press [**DND**] button to enter the DND setting interface and disable DND.

Picture 29 - Enable DND

If the user wants to enable/disable the uninterrupted function on a specific line, the user can set the uninterrupted function on the page of configuring the line.

- 1) Press [Menu] >> [Features] >> [DND] button, Enter the [DND] to edit the interface.
- 2) Click the left/right navigation button to select the line to adjust the mode and state of "do not disturb", and then press the [**OK**] button to save.

The user will see the DND icon turn red, and the sip-line has enabled the mode of "DND".

6.10 Call Forward

Call forward is also known as 'Call Divert' which is to divert the incoming call to a specific number based on the conditions and configurations. User can configure the call forward settings of each line.

There are three types.

- Unconditional Call Forward Forward any incoming call to the configured number.
- **Call Forward on Busy** When user is busy, the incoming call will be forwarded to the configured number.
- Call Forward on No Answer When user does not answer the incoming call after the configured delay time, the incoming call will be forwarded to the configured number.
- Phone interface : Default standby mode
 - Press [Menu] >> [Features] >> [Call Forward] button, select the line by up/down navigation key, press [OK] button to set call forward.

6.11 Call Transfer

When the user is talking with a remote party and wish to transfer the call to another remote party, there are three ways to transfer the call, blind transfer, attended transfer and Semi-Attended transfer.

- Blind transfer: No need to negotiate with the other side, directly transfer the call to the other side.
- Semi-Attended transfer: When you hear the ring back, transfer the call to the other party.
- Attended transfer: When the caller answers the call, transfer the call to the other party.

6.11.1 Blind transfer

During the call, the user presses the function menu button [**Transfer**] or the transfer button on the phone, Enter the number to transfer or press the contact button or the history button to select the number, press the transfer key again or blind transfer to a third party. After the third party rings, the phone will show that the transfer is successful and hang up.

Picture 38 - Transfer interface

6.11.2 Semi-Attended transfer

During the call, the user presses the function menu button [transfer] or the transfer button on the phone to input the number to be transferred or press the contact button or the historical record button to select the number, and then press the call button. When the third party is not answered, press the transfer on the call interface to make the semi-attendance transfer or press the end button to cancel the semi-attendance transfer.

Picture 39 - Semi-Attended transfer

6.11.3 Attended transfer

Attendance transfer is also known as "courtesy mode", which is to transfer the call by calling the other party and waiting for the other party to answer the call.

The same procedure to calling. In dual call mode, press the "transfer" button to transfer the first call to the second call.

Picture 40 - Attended transfer

6.12 Call Waiting

- Enable call waiting: new calls can be accepted during a call.
- Disable call waiting: new calls will be automatically rejected and a busy tone will be prompted.
- Enable call waiting tone: when you receive a new call on the line, the tone will beep.
- The user can enable/disable the call waiting function in the phone interface and the web interface.
- Phone interface: Press [Menu] >> [Features] >> [Call waiting], the navigation key and left/right button enable/disable call waiting and call waiting tone. Press [Menu] >> [Features] >> [Call waiting], the navigation key and left/right button enable/disable call waiting and call waiting tone.

Picture 47 - Network conference

Method to join a network conference:

- Multi-party call number of network conference room and enter the password then all enter the conference room.
- The two phones have established common calls. Press the conference button to invite new members to the conference. Follow the voice prompt to operate.

Note: the upper limit of the number of participants in the network conference varies according to the server.

6.14 Call Park

Call park requires server support. Consult your system administrator for support.

When you are on the call, if it is not convenient to answer the phone at this time, you can press the configured park button to hold the call; After a successful park, you can resume the call by pressing the configured park button on other devices.

Set the call park button:

- Phone interface: long press a function key to enter the function key Settings interface, or through the
 [Menu] >> [Basic Settings] >> [Keyboard Settings] enter the settings interface of function keys, and set
 the key function type as memory and subtypes as call park, reside values for the server calls park number,
 set up corresponding SIP lines.
- WEB interface: log in the phone page, enter the [Function Key] >> [Function Key] page, select a DSS key, set the function key type as memory key, the subtype as call park, and the value as the call park number of the server, and set the corresponding SIP line.

› Call logs				Apply			
• Function Key							

Picture 61 - Web page configuration BLF function key

Phone interface: long press a function key to enter the function key Settings interface, or go to the
[Menu] >> [Basic Settings] >> [Keyboard Settings] to enter [Soft function key] to set the settings
interface, set the key function types as memory keys and a subtype of BLF/NEW CALL,
BLF/BXFER, BLF/AXFER, BLF/CONF, BLF/DTMF. The values are the subscription number, and set
up corresponding SIP lines.

Picture 62 - Phone configuration BLF function key

Subtype	Standby is described	Calling is described
BLF/NEW	Pressing the BLF key while standby to	When you press this BLF key while talking to
	dial the subscriber number.	another user, you create a new call along with
UALL		the subscribed number.
BLF/BXFE	Pressing the BLF key while standby to	When you press this BLF key while talking to
R	dial the subscriber number.	another user, you blind transfer the call to the
		subscribed number.

Kuwait

Tel.: 1880005 Fax: 22413877

Table 8 - BLF Function key subtype parameter list

BLF/AXFE R	Pressing the BLF key while standby to dial the subscriber number.	When you press this BLF key while talking to another user, you attendance transfer the call to the subscribed number.
BLF/Confer ence	Pressing the BLF key while standby to dial the subscriber number.	When you press this BLF key while talking to another user, you invite the subscriber number to join the meeting.
BLF/DTMF	Pressing the BLF key while standby to dial the subscriber number.	When the BLF key is pressed while talking to another user, the phone automatically sends the DTMF corresponding to the BLF key number.

7.1.2 Use the BLF Function

The BLF, also known as a "busy light field," notifies the user of the status of the subscribed object and is used by the server to pick up the call. BLF helps you monitor the other person's status (idle, ringing, talking, off). BLF function:

- Monitor the status of subscribed phones.
- Call the subscribed number.
- Transfer calls/calls to the subscribed number.
- Pickup incoming calls from subscribed number.
- 1) Monitors the status of subscribed phones.

Configuration BLF function keys, when the subscription of the number of the state (idle, ringing, talking) is changed, the LED lights of function key will have corresponding change

2) Call the subscribed number.

When the phone is in standby mode, press the configured BLF key to call out the subscribed number.

3) Transfer calls to the subscribed number.

The BLF key can be used for blind rotation, attention-rotation and semi-attention-rotation of the current call, and also can invite the subscribed number to join the call and send DTMF, etc.

4) Pickup incoming calls from subscribed phones.

When configuring BLF function key, configure the pickup number.

When the subscription number telephone rings will turn red at this time. At this point, press the BLF button to answer the incoming call from the subscribed number.

7.2 BLF List

BLF List Key is to put the number to be subscribed into a group on the server side, and the phone uses the URL of this group to make unified subscription. The specific information, number, name and status of each number can be resolved based on notify sent from the server. The unoccupied Memory Key is then set as the BLF List Key. If the state of the subscription object changes later, the corresponding led light state will be changed.

Configure BLF List function: log in the phone page, enter the [Line] >> [SIP] >> [Advanced settings] page, open the BLF List, and configure the BLF List number.

7.3 Record

The device supports recording during a call.

7.3.1 Server Record

When using the network server to record, it is necessary to open the recording in the phone web page [**Application**] >> [**Manage recording**]. The type is selected as network, and the address and port of the recording server are filled in and the voice coding is selected. The web is as follows:

Record Setting				
Enable Record:				
Record Type:		Network v		
Voice Codec:		G729 🔻		
Server Address:		172.16.7.11	Server Port:	10000
		Apply		
Recording List				
	Index		File Name	File Size
				Delete

Picture 65 - Web server recording

7.3.2 SIP INFO Record

The phone is registered with a server that supports SIP INFO recording. After registering the account, check the recording module of [**Application**] >> [**Manage recording**] to open the recording, and the recording type is SIP INFO.

Record Setting			
Enable Record: Record Type:	✓ Sip Info	Y	
		Apply	
Recording List			
	Index	File Name	File Size
			Delete

Picture 66 - Web SIP info recording

7.4 Agent

Agent (Agent function) of the phone can be realized: when multiple people use a device for Agent services at different times, he or she can quickly register his or her SIP account on the same server. The Agent functions of the phone can be divided into Normal and Hotel Guest. The Hotel Guest mode requires server support. Normal Mode:

Configure agent function: set a DSS key as agent, press the function key or enter the [Menu] >>

[**Features**] >> [**Agent**] to enter the agent page. The SIP server needs to be configured before the account can be configured.

Agent

	intercom call

7.6 MCAST

This feature allows user to make some kind of broadcast call to people who are in multicast group. User can configure a multicast DSS Key on the phone, which allows user to send a Real Time Transport Protocol (RTP) stream to the pre-configured multicast address without involving SIP signaling. You can also configure the phone to receive an RTP stream from pre-configured multicast listening address without involving SIP signaling. You can specify up to 10 multicast listening addresses.

DSS Key 2	Line			None	SIP2	•	
			Apply				

Picture 75 - Set Private Hold Function Key

- Each phone registered with the BroadSoft server should be configured as above, then the SCA function can be used.
- 2) LED Status

To facilitate viewing the call status of a group, configure the DSS Key as SCA. The following table describes the LEDs of lines in different states.

State & Direction	Local	Remote
Idle	Off	Off
Seized	Steady White	Steady red
Progressing (outgoing call)	Steady White	Steady red
Alerting (incoming call)	Fast blinking White	Fast blinking White
Active	Steady White	Steady red
Public Held (hold)	Slow blinking White	Slow blinking red
Held-private (private hold)	Slow blinking yellow	Steady red
Bridge-active (Barge-in)	Steady White	Steady red
Bridge-held	Steady White	Steady red

Table 12 - LED Status of SCA

3) Shared Call Appearance(SCA)

The following lists a couple of instances to facilitate understanding.

In the following scenarios, the manager and secretary register the same SCA account and the account is configured based on the preceding steps.

Scenario 1: When this account receives an incoming call, the phone sets of both the manager and the secretary will receive the call and ring. If the manager is busy, the manager can reject the call and the manager's phone set stops ringing but the secretary's phone set keeps ringing until the secretary rejects/answers the call or the call times out.

Scenario 2: When this account receives an incoming call, if the secretary answers the call first and the manager is required to answer the call, the secretary can press the Public Hold key to hold this call and notify

the manager. The manager can press the line key corresponding to the SCA to answer the call. Scenario 3: The manager is in an important call with a customer and needs to leave for a while. If the manager does not want others to retrieve this call, the manager can press the Private Hold key. Scenario 4: The manager is in a call with a customer and requires the secretary to join the call to make records. The secretary can press the corresponding SCA line key to barge in this call.

7.8 Message

7.8.1 **SMS**

If the service of the line supports the function of the short message, when the other end sends a text message to the number, the user will receive the notification of the short message and display the icon of the new SMS on the standby screen interface.

Picture 76 - SMS icon

Send messages:

- Go to [Menu] >> [Message] >> [SMS].
- Users can create new messages, select lines and send numbers.
- After editing is completed, click Send.

View SMS:

- Use the navigation keys to select the standby icon [message]
- After selecting, press the navigation key [**OK**] to enter the SMS inbox interface.
- Select the unread message and press [**OK**] to read the unread message.

Reply to SMS:

- Use the navigation keys to select the standby icon [Message].
- After selecting, press the navigation key [**OK**] to enter the SMS inbox interface.
- Select the message you want to reply to, select Soft key's [Reply], edit it, and click Send.

7.8.2 MWI (Message Waiting Indicator)

If the service of the lines supports voice message feature, when the user is not available to answer the call, the caller can leave a voice message on the server to the user. User will receive voice message notification from the server and device will prompt a voice message waiting icon on the standby screen.

Picture 77 - New Voice Message Notification

Kuwait

To listen to a voice message, the user must first configure the voicemail number. After the voicemail number is configured, the user can retrieve the voicemail of the default line.

When the phone is in the default standby state,

- The Side Key is pre-installed with a voice message shortcut key [MWI] key.
- Press [**MWI**] to open the voice message configuration interface, and select the line to be configured by pressing the up/down navigation buttons.
- Press the [Edit] button to edit the voice message number. When finished, press the [OK] button to save the configuration.
- In the following picture, "17" in front of the line brackets represents unread voice messages, and "17" represents the total number of voice messages.

7.9 SIP Hotspot

SIP hotspot is a simple but practical function. With simple configurations, the SIP hotspot function can implement group ringing. SIP accounts can be expanded.

The users can set functions as a SIP hotspot and other phones set (B and C) function as SIP hotspot clients. When somebody calls phone set A, phone sets A, B, and C all ring at the same time. When any phone set answers the call, other phone sets stop ringing. The call can be answered by only one phone set. When B or C initiates a call, the SIP number registered by phone set A is the calling number.

To set a SIP hotspot, register at least one SIP account.

8.1.3.2 Screen Saver

- Press [Screen Settings] to find the [Screen protection] button, press [left] / [right] button to open/close the screen protection, set the timeout time, the default is 15S, after completion, press [OK] button to save.
- After saving, return to standby mode and enter the screen saver after 15s, as follows:

Picture 89 - Phone screen saver

8.1.4 **Ring**

When the device is in the default standby mode,

- Press soft-button [Menu] till you find the [Basic] item.
- Enter [**Basic**] item till you find [**Ring**] item.
- Enter [**Ring**] item and you will find [**Headset**] or [**Handsfree**] item, press left / right navigator keys to adjust the ring volume, save the adjustment by pressing [**OK**] when done.
- Enter [**Ring type**] item, press left / right navigator keys to change the ring type, save the adjustment by pressing [**OK**] when done.

8.1.5 Voice Volume

When the device is in the default standby mode,

- Press soft-button [Menu] till you find the [Basic] item.
- Enter [Basic] item till you find [Voice Volume] item.
- Enter [Voice Volume] item and you will find [Headset], [Handsfree] and [Headset] item.
- Enter [Headset] or [Handsfree] or [Headset] item, press Left / Right navigator keys to adjust the audio volume for different mode.
- Save the adjustment by pressing [OK] when done.

8.1.6 **Greeting Words**

When the device is in the default standby mode,

- Press soft-button [Menu] till you find the [Basic] item.
- Enter [Basic] item till you find [Greeting Words] item.
- Press [**OK**] to enter the setting interface to edit the Greetings Words.
- Save the adjustment by pressing [**OK**] when done.

NOTICE! The welcome message can only be displayed in the upper left corner of standby mode when the default option is disabled.

8.1.7 **Reboot**

When the device is in the default standby mode,

- Press soft-button [Menu] till you find the [Basic] item.
- Enter [Basic] item till you find [Reboot] item.
- Press [OK] a prompt message, "restart now," prompts the user.
- Press [**OK**] to restart the phone or [**Cancel**]. The phone is in standby mode,
- The configurable [**OK**] key is the restart key. Press [**OK**], a prompt message, "restart now" prompts the user.
- Press [OK] to restart the phone or [Cancel] to exit.

8.2 Phone Book

8.2.1 Local Contact

User can save contacts' information in the phone book and dial the contact's phone number(s) from the

Kuwait

phone book. To open the phone book, user should press soft-menu button [**Contact**] in the default standby screen or keypad.

By default, the phone book is empty, user may add contact(s) into the phone book manually or from call logs.

Picture 90 - Phone book screen

Note!Phone user account can store contact information, different models and specifications.

8.2.3 Cloud Phone Book

8.2.3.1 Configure Cloud Phone book

Cloud phonebook allows user to configure the device by downloading a phonebook from a cloud server. This is convenient for office users to use the phonebook from a single source and save the effort to create and maintain the contact list individually. It is also a useful tool to synchronize his/her phonebook from a personal mobile phone to the device with Cloud Phonebook Service and App which is to be provided publicly soon. *NOTICE! The cloud phonebook is ONLY temporarily downloaded to the device each time when it is opened on the device to ensure the user get the latest phonebook. However, the downloading may take a couple seconds depending on the network condition. Therefore, it is highly recommended for the users to save important contacts from cloud to local phonebook for saving download time. Open cloud phonebook list, press [Menu] >> [PhoneBook] >> [Cloud Contacts] in phonebook screen. TIPS! The first configuration on cloud phone should be completed on Web page by selecting [PhoneBook] >> [Cloud Contacts]. The setting of addition/deletion on device could be done after the first setting on Web page.*

Picture 98 - Cloud phone book list

8.2.3.2 Downloading Cloud Phone book

In cloud phone book screen, user can open a cloud phone book by pressing [**OK**] / [**Enter**] button. The device will start downloading the phone book. The user will be prompted with a warning message if the download fails,

Once the cloud phone book is downloaded completely, the user can browse the contact list and dial the contact number same as in local phonebook.

Picture 99 - Downloading Cloud Phone book

8.6.2.2 QoS & VLAN

LLDP

Link Layer Discovery Protocol. LLDP is a vendor independent link layer protocol used by network devices for advertising their identity, capabilities to neighbors on a LAN segment.

Phone could use LLDP to find the VLAN switch or other VLAN devices and use LLDP learn feature to apply the VLAN ID from VLAN switch to phone its self.

CDP

Cisco Discovery Protocol. CDP is a not-for-profit charity that runs the global disclosure system for investors, companies, cities, states and regions to manage their environmental impacts. According to the CDP, Cisco devices could share the OS version, IP address, hardware version and so on.

Parameters	Description
LLDP setting	
Report	Enable LLDP
Interval	LLDP requests interval time
Learning	apply the learned VLAN ID to the phone configuration
QoS	
QoS Mode	configure SIP DSCP and audio DSCP
WAN VLAN	
WAN VLAN	WAN port VLAN configuration
LAN VLAN	
LAN VLAN	LAN port VLAN configuration
CDP	
CDP	CDP enable/disable, CDP interval time

Table 15 - QoS & VLAN

8.6.2.3 VPN

Virtual Private Network (VPN) is a technology to allow device to create a tunneling connection to a server and becomes part of the server's network. The network transmission of the device may be routed through the VPN server.

For some users, especially enterprise users, a VPN connection might be required to be established before activate a line registration. The device supports two VPN modes, Secure Socket Tunneling Protocol (SSTP) and OpenVPN.

www.xontel.com

Kuwait KSA Tel.: 1880005 Fax: 22413877 Tel.: 920007622 Fax: 011-4700403

The VPN connection must be configured and started (or stopped) from the device web portal.

SSTP

NOTICE! The device only supports non-encrypted basic authentication and non-encrypted data tunneling. For users who need data encryption, please use OpenVPN instead.

To establish a SSTP connection, users should log in to the device web portal, open webpage [**Network**] >> [**VPN**]. In VPN Mode, check the "Enable VPN" option and select "SSTP", then fill in the SSTP server address, Authentication Username, and Authentication Password in the SSTP section. Press "Apply" then the device will try to connect to the SSTP server.

When the VPN connection established, the VPN IP Address should be displayed in the VPN status. There may be the delay of the connection establishment. User may need to refresh the page to update the status. Once the VPN is configured, the device will try to connect with the VPN automatically when the device boots up every time until user disable it. Sometimes, if the VPN connection does not establish immediately, user may try to reboot the device and check if VPN connection established after reboot.

OpenVPN

To establish an OpenVPN connection, user should get the following authentication and configuration files from the OpenVPN hosting provider and name them as the following,

OpenVPN Configuration file:	client.ovpn
CA Root Certification:	ca.crt
Client Certification:	client.crt
Client Key:	client.key

User then upload these files to the device in the web page [**Network**] >> [**VPN**], select OpenVPN Files. Then user should check "Enable VPN" and select "OpenVPN" in VPN Mode and click "Apply" to enable OpenVPN connection.

Same as SSTP connection, the connection will be established every time when system rebooted until user disable it manually.

8.6.2.4 Web Server Type

Configure the Web Server mode to be HTTP or HTTPS and will be activated after the reboot. Then user could use http/https protocol to access pone web page.

——Web	Serve	r Type	,

Besides, summarization of SIP account status,

- SIP User
- SIP account status (Registered / Unapplied / Trying / Timeout)

9.3 System >> Account

On this page the user can change the password for the login page.

Users with administrator rights can also add or delete users, manage users, and set permissions and passwords for new users.

9.4 System >> Configurations

On this page, users with administrator privileges can view, export, or import the phone configuration, or restore the phone to factory Settings.

Clear Configurations

Select the module in the configuration file to clear.

SIP: account configuration.

AUTOPROVISION: automatically upgrades the configuration

TR069: TR069 related configuration

MMI: MMI module, including authentication user information, web access protocol, etc.

DSS Key: DSS Key configuration

Clear Data Tables

Select the local data table to be cleared, all selected by default.

Reset Phone

The phone data will be cleared, including configuration and database tables.

9.5 System >> Upgrade

Upgrade the phone software version, customized ringtone, background, DSS Key icon, etc., can also be upgraded to delete the file. Ring tone support ".wav" format.

9.6 System >> Auto Provision

The Auto Provision settings help IT manager or service provider to easily deploy and manage the devices in mass volume. For the detail of Auto Provision, please refer to this link Auto Provision Description.

9.7 System >> Tools

Tools provided in this page help users to identify issues at troubleshooting.

9.8 System >> Reboot Phone

This page can restart the phone.

Network >> Basic 10

This page allows users to configure network connection types and parameters.

Network >> Service Port 10.1

This page provides settings for Web page login protocol, protocol port settings and RTP port.

Web Server Type:	HTTP 🗸		C
Web Logon Timeout:	15	(10~30)Minute	C
web auto login:			
HTTP Port:	80		0
HTTPS Port:	443		0
RTP Port Range Start:	10000	(1025~65530)	0
RTP Port Quantity :	1000	(10~1000)	0

Picture 124 - Service Port Settings

Parameter	Description	
Web Server Type	Reboot to take effect after settings. Optionally, the web page login is	
	HTTP/HTTPS.	
Web Logon Timeout	Default as 15 minutes, the timeout will automatically exit the login page, need	
	to login again.	
Web auto login	After the timeout does not need to enter a user name password, will	
	automatically login to the web page.	
	The default is 80. If you want system security, you can set ports other than 80.	
HTTP Port	Such as :8080, webpage login: HTTP://ip:8080	
HTTPS Port	The default is 443, the same as the HTTP port.	
RTP Port Range Start	The value range is 1025 to 65535. The value of RTP port starts from the initial	
	value set. For each call, the value of voice and video port is added 2.	
RTP Port Quantity	Number of calls.	

Kuwait

Network >> VPN 10.2

Users can configure a VPN connection on this page.

Network >> Advanced 10.3

Advanced network Settings are typically configured by the IT administrator to improve the quality of the phone service.

10.4 Line >> SIP

Configure the Line service configuration on this page.

Parameters	Description		
Register Settings			
Line Status	Display the current line status at page loading. To get the up to date line		
	status, user has to refresh the page manually.		
Activate	Whether the service of the line is activated		
Username	Enter the username of the service account.		
Authentication User	Enter the authentication user of the service account		
Display Name	Enter the display name to be sent in a call request.		
Authentication Password	Enter the authentication password of the service account		
Realm	Enter the SIP domain if requested by the service provider		
Server Name	Input server name.		
SIP Server 1			
Server Address	Enter the IP or FQDN address of the SIP server		
Server Port	Enter the SIP server port, default is 5060		
Transport Protocol	Set up the SIP transport line using TCP or UDP or TLS.		
Registration Expiration	Set SIP expiration date.		
SIP Server 2			
Server Address	Enter the IP or FQDN address of the SIP server		
Server Port	Enter the SIP server port, default is 5060		
Transport Protocol	Set up the SIP transport line using TCP or UDP or TLS.		
Registration Expiration	Set SIP expiration date.		
SIP Proxy Server	Enter the ID or EODN address of the SID provide on ver		
Address	Enter the IP or FQDN address of the SIP proxy server.		
Proxy Server Port	Enter the SIP proxy server port, default is 5060.		
Proxy User	Enter the SIP proxy user.		
Proxy Password	Enter the SIP proxy password.		
Backup Proxy Server	Enter the IP or FQDN address of the backup proxy server.		
Address			
Backup Proxy Server	Enter the backup proxy server port, default is 5060.

XonTel Technology Co.

Port			
Basic Settings			
Enable Auto Answering	Enable auto-answering, the incoming calls will be answered automatically		
	after the delay time		
Auto Answering Delay	Set the delay for incoming call before the system automatically answered it		
Call Forward	Enable unconditional call forward, all incoming calls will be forwarded to the		
Unconditional	number specified in the next field		
Call Forward Number for Unconditional	Set the number of unconditional call forward		
Call Forward on Busy	Enable call forward on busy, when the phone is busy, any incoming call will be forwarded to the number specified in the next field.		
Call Forward Number for Busy	Set the number of call forward on busy .		
Call Forward on No Answer	Enable call forward on no answer, when an incoming call is not answered within the configured delay time, the call will be forwarded to the number specified in the next field.		
Call Forward Number for No Answer	Set the number of call forward on no answer.		
Call Forward Delay for No Answer	Set the delay time of not answered call before being forwarded.		
Transfer Timeout	Set the timeout of call transfer process.		
Conference Type	Set the type of call conference, Local=set up call conference by the device itself, maximum supports two remote parties, Server=set up call conference by dialing to a conference room on the server		
Server Conference Number	Set the conference room number when conference type is set to be Server		
Subscribe For Voice Message	Enable the device to subscribe a voice message waiting notification, if enabled, the device will receive notification from the server if there is voice message waiting on the server		
Voice Message Number	Set the number for retrieving voice message		
Voice Message Subscribe Period	Set the interval of voice message notification subscription		
Enabling hotline configuration, the device will dial to the specific num Enable Hotline immediately at audio channel opened by off-hook handset or turn on free speaker or headphone			
Hotline Delay	Set the delay for hotline before the system automatically dialed it		
Hotline Number	Set the hotline dialing number		
Dial Without Registered	Set call out by proxy without registration

defined Dia	l Plan Table	0								

Picture 126 - Custom setting of dial - up rules

Table 21 - Dial - up rule configuration table

Parameters	Description			
	There are two types of matching: Full Matching or Prefix Matching. In Full matching,			
	the entire phone number is entered and then mapped per the Dial Peer rules.			
Dial rule	In prefix matching, only part of the number is entered followed by T. The mapping			
	with then take place whenever these digits are dialed. Prefix mode supports a			
	maximum of 30 digits.			
Note: Two different special characters are used.				
x Matches any single digit that is dialed.				
■ [] Specifies a range of numbers to be matched. It may be a range, a list of ranges separated by				
commas, or a list of digits.				
Destination	Destination Set Destination address. This is for IP direct.			
Port	Set the Signal port, and the default is 5060 for SIP.			
Alias	Set the Alias. This is the text to be added, replaced or deleted. It is an optional item.			
Note: There are fou	ur types of aliases.			

Kuwait

Tel.: 1880005 Fax: 22413877

- all: xxx xxx will replace the phone number.
- add: xxx xxx will be dialed before any phone number.
- del –The characters will be deleted from the phone number.
- rep: xxx xxx will be substituted for the specified characters.

Suffix		Characters to be added at the end of the phone number. It is an optional item.			
	Longth	Set the number of characters to be deleted. For example, if this is set to 3, the phone			
	Length	will delete the first 3 digits of the phone number. It is an optional item.			

This feature allows the user to create rules to make dialing easier. There are several different options for dial rules. The examples below will show how this can be used.

Example 1: All Substitution -- Assume that it can make a direct IP call to IP address 172.168.2.208. Using this feature, 123 can be substituted for 172.168.2.208.

Picture 127 - Dial rules table (1)

Example 2: Partial Substitution -- To dial a long distance call to Beijing requires dialing area code 010 before the local phone number. Using this feature 1 can be substituted for 010. For example, to call 62213123 would only require dialing 162213123 instead of 01062213123.

202		- 11		729		
Index	Digit Map	Call	Match to Send	Line	Alias Type:Number(length)	Suffix

Picture 128 - Dial rules table (2)

Example 3: Addition -- Two examples are shown. In the first case, it is assumed that 0 must be dialed before any 11-digit number beginning with 13. In the second case, it is assumed that 0 must be dialed before any 11-digit number beginning with 135, 136, 137, 138, or 139. Two different special characters are used.

x -- Matches any single digit that is dialed.

[] -- Specifies a range of numbers to be matched. It may be a range, a list of ranges separated by commas, or a list of digits.

Value	Set the value to specify the ring type.
Ring Type	Туре1-Туре9

10.10 Phone settings >> MCAST

This feature allows user to make some kind of broadcast call to people who are in multicast group. User can configure a multicast DSS Key on the phone, which allows user to send a Real Time Transport Protocol (RTP) stream to the pre-configured multicast address without involving SIP signaling. You can also configure the phone to receive an RTP stream from pre-configured multicast listening address without involving SIP signaling. You can specify up to 10 multicast listening addresses.

Table 25 - Multicast parameters

Kuwait

Tel.: 1880005 Fax: 22413877

Parameters	Description
Normal Call Priority	Define the priority of the active call, 1 is the highest priority, 10 is the lowest.
Enable Page Priority	The voice call in progress shall take precedence over all incoming paging calls.
Name	Listened multicast server name
Host: port	Listened multicast server's multicast IP address and port.

Phone settings >> Action 10.11

Picture 129 - Tone settings on the web

Kuwait

Phone settings >> Advanced 10.14

User can configure the advanced configuration settings in this page.

- Screen Configuration.
 - **Enable Energy Saving**
 - **Backlight Time**

• LCD Menu Password Settings.

The password is 123 by default.

- Keyboard Lock Settings.
- Configure Greeting Words

The greeting message will display on the top left corner of the LCD when the device is idle, which is limited to 16 characters. The default chars are 'VOIP PHONE'.

10.15 Phonebook >> Contact

User can add, delete, or edit contacts in the phonebook in this page. User can browse the phonebook and sorting it by name, phones, or filter them out by group.

To add a new contact, user should enter contact's information and press "Add" button to add it.

To edit a contact, click on the checkbox in front of the contact, the contact information will be copied to the contact edit boxes, press "Modify" button after finished editing.

To delete one or multiple contacts, check on the checkbox in front of the contacts wished to be deleted and click the "Delete" button, or click the "Clear" button with selecting any contacts to clear the phonebook. User can also add multiple contacts into a group by selecting the group in the dropdown options in front of "Add to Group" button at the bottom of the contact list, selecting contacts with checkbox and click "Add to Group" to add selected contacts into the group.

Similarly, user can select multiple users and add them into blacklist by click "Add to Blacklist" button.

10.16 Phonebook >> Cloud phonebook

Cloud Phonebook

User can configure up to 8 cloud phonebooks. Each cloud phonebook must be configured with an URL where an XML phonebook is stored. The URL may be based on HTTP/HTTPs or FTP protocol with or without authentication. If authentication is required, user must configure the username and password. To configure a cloud phonebook, the following information should be entered,

- □ Phonebook name (must)
- D Phonebook URL (must)
- □ Access username (optional)
- □ Access password (optional)

LDAP Settings

The cloud phonebook allows user to retrieve contact list from a LDAP Server through LDAP protocols. User must configure the LDAP Server information and Search Base to be able to use it on the device. If the LDAP server requests an authentication, user should also provide username and password. To configure a LDAP phonebook, the following information should be entered,

- Display Title (must)
 - LDAP Server Address (must)
- □ LDAP Server Port (must)

Search Base (must)

- Access username (optional) \square
- Access password (optional) \square

Note! Refer to the LDAP technical documentation before creating the LDAP phonebook and

phonebook server.

Web page preview

Phone page supports preview of Internet phone directory and contacts

- After setting up the XML Voip directory or LDAP, •
- Select [Phone book] >> [Cloud phone book] >> [Cloud phone book] to select the type.
- Click the set XML/LDAP to download the contact for browsing.

10.17 Phonebook >> Call List

Restricted Incoming Calls:

It is similar like a blacklist. Add the number to the blacklist, and the user will no longer receive calls from the stored number until the user removes it from the list.

Users can add specific Numbers to the blacklist or add specific prefixes to the blacklist to block calls with all Numbers with this prefix.

Allowed Incoming Calls:

When DND is enabled, the incoming call number can still be called.

Restricted Outgoing Calls:

Adds a number that restricts outgoing calls and cannot be called until the number is removed from the table.

Kuwait

10.18 Phonebook >> Web Dial

Use web pages for call, reply, and hang up operations.

10.19 Phonebook >> Advanced

Users can export the local phone book in XML, CSV, and VCF format and save it on the local computer. Users can also import contacts into the phone book in XML, CSV, and VCF formats.

Attention! If the user imports the same phone book repeatedly, the same contact will be ignored. If the name is the same but the number is different, the contact is created again.

Users can delete groups or add new groups on this page. Deleting a contact group does not delete contacts in that group.

10.20 Call Log

The user can browse the complete call record in this page. The call record can be sorted by time. Call number, contact name or line, and the call record can be screened by call record type (incoming call, outgoing call, missed call, forward call).

The user can also save the number in the call record to his/her phone book or add it to the blacklist/whitelist. Users can also dial the web page by clicking on the number in the call log.

Users can also download call records conditionally and save them locally.

10.21 Function Key >> Function Key

One-key transfer Settings: establish new call, blind transfer, attention-transfer, one-key three-party, Play DTMF.

The device provides 2 user-defined shortcuts that users can configure on a web page.

Table 27 - Function Key configuration

Parameters	Description
	BLF (NEW CALL/BXFE /AXFER): It is used to prompt user the state of the subscribe
	extension, and it can also pick up the subscribed number, which help user monitor the
	state of subscribe extension (idle, ringing, a call). There are 3 types for one-touch BLF
	transfer method.
	p.s. User should enter the pick-up number for specific BLF key to fulfill the pick-up
	operation.
Memory Key	Presence: Compared to BLF, the Presence is also able to view whether the user is
	online.
	Note: You cannot subscribe the same number for BLF and Presence at the same time
	Speed Dial: You can call the number directly which you set. This feature is convenient
	for you to dial the number which you frequently dialed.
	Intercom: This feature allows the operator or the secretary to connect the phone
	quickly; it is widely used in office environments.
Line	It can be configured as a Line Key. User is able to make a call by pressing Line Key.

Key Event	User can select a key event as a shortcut to trigger.
	For example: MWI / DND / Release / Headset / Hold / etc.
DTMF	It allows user to dial or edit dial number easily.
URL	Open the specific URL directly.
	Configure the multicast address and audio codec. User presses the key to initiate the
Multicast	multicast.
Action URL	The user can use a specific URL to make basic calls to the phone.
XML browser	Users can set the DSS Key for specific URL download and other operations.

10.22 Function Key >> Softkey

> Application	Deny/Permit Deny V Src Mask Add
> Security	Protocol UDP V Src Port Range Dst Port Range

Picture 136 - Network firewall Settings

The user can set whether to enable the input through this page, output firewall and set the firewall input and output rules. Using these Settings can prevent some malicious network access, or restrict internal users access to some resources of the external network, which can improve security.

Firewall rule set is a simple firewall module. This feature supports two types of rules: input rules and output rules. Each rule is assigned an ordinal number, allowing up to 10 for each rule.

Considering the complexity of firewall Settings, the following is an example to illustrate:

Parameter	Description
Enable Input Rules	Indicates that the input rule application is enabled.
Enable Output Rules	Indicates that the output rule application is enabled.
Input/Output	To select whether the currently added rule is an input or output rule.
Deny/Permit	To select whether the current rule configuration is disabled or allowed;
Protocol	There are four types of filtering protocols: TCP UDP ICMP IP.
Src Port Range	Filter port range
	Source address can be host address, network address, or all addresses
Src Address	0.0.0.0; It can also be a network address similar to *.*.*.0, such as:
	192.168.1.0.
	The destination address can be either the specific IP address or the full
Dst Address	address 0.0.0.0; It can also be a network address similar to *.*.*.0, such as:
	192.168.1.0.
	Is the source address mask. When configured as 255.255.255.255, it means
Src Mask	that the host is specific. When set as 255.255.255.0, it means that a network
	segment is filtered.

Kuwait

Tel.: 1880005 Fax: 22413877

Table 29 - Network Firewall

	Is the destination address mask. When configured as 255.255.255.255, it	
Dst Mask	means the specific host. When set as 255.255.255.0, it means that a network	
	segment is filtered.	

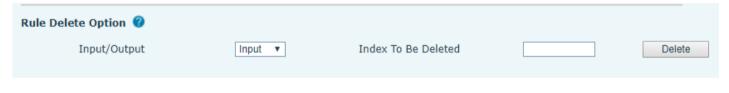

After setting, click [Add] and a new item will be added in the firewall input rule, as shown in the figure below:

Fire	rewall Input Rule Table 🕜								
	Index D	eny/Permit	Protocol	Src Address	Src Mask	Src Port Range	Dst Address	Dst Mask	Dst Port Range
	1	deny	udp	192.168.1.0	192.168.1.154	0-9	255.255.255.0	255.255.255.0	0-9

Picture 137 - Firewall Input rule table

Then select and click the button [Apply].

In this way, when the device is running: ping 192.168.1.118, the packet cannot be sent to 192.168.1.118 because the output rule is forbidden. However, the other IP of the ping 192.168.1.0 network segment can still receive the response packet from the destination host normally.

Picture 138 - Delete firewall rules

Select the list you want to delete and click [Delete] to delete the selected list.

10.29 Device Log >> Device Log

You can grab the device log, and when you encounter an abnormal problem, you can send the log to the technician to locate the problem. See 11.6 Get log information.

11 Troubleshooting

When the phone is not in normal use, the user can try the following methods to restore normal operation of the phone or collect relevant information and send a problem report to manufacturer technical support mailbox.

11.1 Get Device System Information

Users can get information by pressing the [**Menu**] >> [**Status**] option in the phone. The following information will be provided:

The network information

Equipment information (model, software and hardware version), etc.

11.2 Reboot Device

Users can reboot the device from soft-menu, [Menu] >> [Basic] >> [Reboot System], and confirm the action by [OK]. Or, simply remove the power supply and restore it again.

11.3 Reset Device to Factory Default

Resetting Device to Factory Default will erase all the user's configuration, preference, database and profiles on the device and restore the device back to the state as factory default.

To perform a factory default reset, user should press [Menu] >> [Advanced], and then input the password to enter the interface. Then choose [Factory Reset] and press [Enter], and confirm the action by [OK]. The device will be rebooted into a clean factory default state.

11.4 Screenshot

If there is a problem with the phone, the screenshot can help the technician locate the function and identify the problem. In order to obtain screen shots, log in the phone webpage [**System**] >> [**Tools**], and you can capture the pictures of the main screen and the secondary screen (you can capture them in the interface with problems).

11.5 Network Packets Capture

Sometimes it is helpful to dump the network packets of the device for issue identification. To get the packets dump of the device, user needs to log in the device web portal, open page [**System**] >> [**Tools**] and click [**Start**] in "Network Packets Capture" section. A pop-up message will be prompt to ask user to save the capture file. User then should perform the relevant operations such as activating/deactivating line or making phone calls and click [**Stop**] button in the web page when operation finished. The network packets of the device during the period have been dumped to the saved file.

Picture 140 - Web capture

User may examine the packets with a packet analyzer or send it to manufacturer support mailbox.

11.6 Get Log Information

Log information is helpful when encountering an exception problem. In order to get the log information of the phone, the user can log in the phone web page, open the page [**Device log**], click the [**Start**] button, follow the steps of the problem until the problem appears, and then click the [**End**] button, [**Save**] to local analysis or send the log to the technician to locate the problem.

11.7 Common Trouble Cases

Trouble Case		lution
	1.	The device is powered by external power supply via power adapter or
		PoE switch. Please use standard power adapter provided
		by manufacturer or PoE switch met with the specification requirements
Device could not boot up		and check if device is well connected to power source.
	2.	If you saw "POST MODE" on the device screen, the device system
		image has been damaged. Please contact location technical support to
		help you restore the phone system.

Table 30 - Trouble Cases
