1. Login interface

Enter the IP address of the camera in Google or Firefox (**the default IP address is 192.168.1.188**) to enter the login interface, as shown below:

Username : **admin**

Password : **admin**

Language Arabic and English can be selected:

Forgot password: click this button to reset the password according to the wizard;

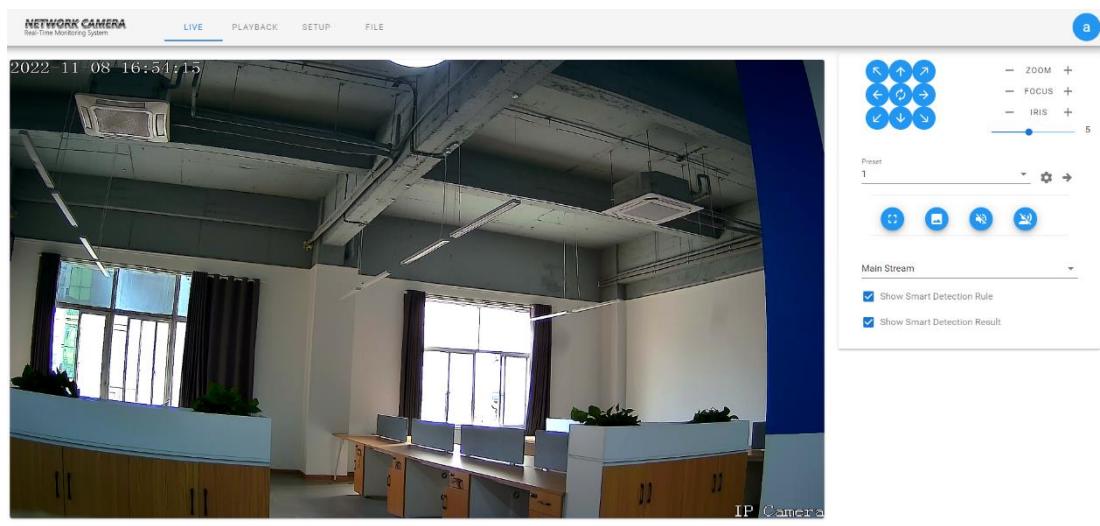

Select the sun icon to use the white page, and select the moon icon to use the black page;

Click [Login] to successfully log in to the camera.

Real-time Preview

After successful login, the interface is as follows:

Note: The device needs to be inserted with a TF card as a full function display interface, otherwise, the device is a simple display interface.

2.1 Full screen preview

Click the full screen icon to preview the full screen, and press ESC to exit the full screen

2.2 PTZ control

PTZ control: Eight direction keys can control the rotation of front-end equipment, and the middle is automatic rotation

Zoom : Adjustable zoom size

Focus : Adjustable focus size

Iris : Adjustable iris size

Speed : The slider can control the speed of the PTZ

+965 1880005

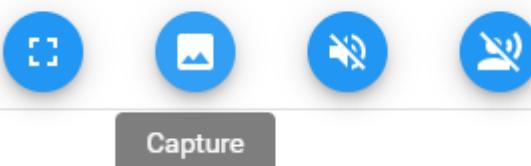

www.xontel.com

kuwait@xontel.com

【Preset point setting】 First, turn the camera to the desired position through the direction button controlled by the PTZ, then select a preset number in the "preset point" drop-down list, and finally click the  setting button.

【Preset point call】 Select a preset number to be called from the "preset point" drop-down list, and then click the  call button.

【Capture】 Preview the snapshot, and click it to automatically pop up the snapshot saving path file

【Sound】 Turn on/off sound preview

【Talk】 Turn on/off voice intercom

Main Stream 

2.2 Stream type selection

Select the current main stream preview or sub stream preview

2.3 Display intelligent detection

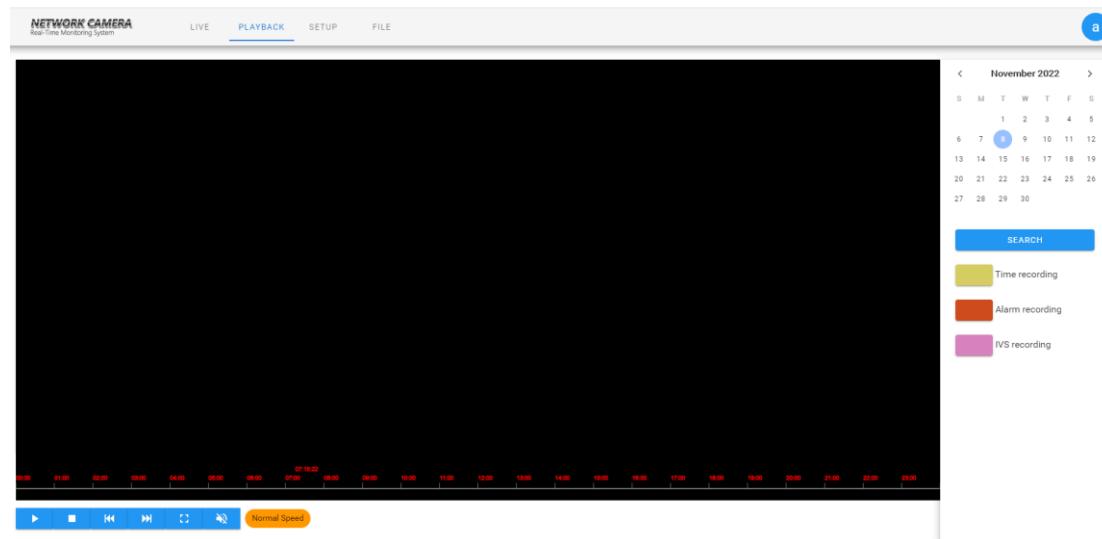

Show Smart Detection Rule

Show Smart Detection Result

Display intelligent detection rules: select whether to display intelligent detection types

Display intelligent detection results: select whether to display the statistical results of intelligent detection

Playback

Click "Video Playback" to enter the playback interface, select the time to call the video, click search button

SEARCH the video will be automatically retrieved;

play : Start current playback;

stop : Stop current playback;

Slow : Slow down playback speed (1/2, 1/4, 1/8, 1/16 times respectively);

Fast : Speed up playback (2, 4, 8, 16 times respectively);

Full screen : the playback screen will be displayed in full screen;

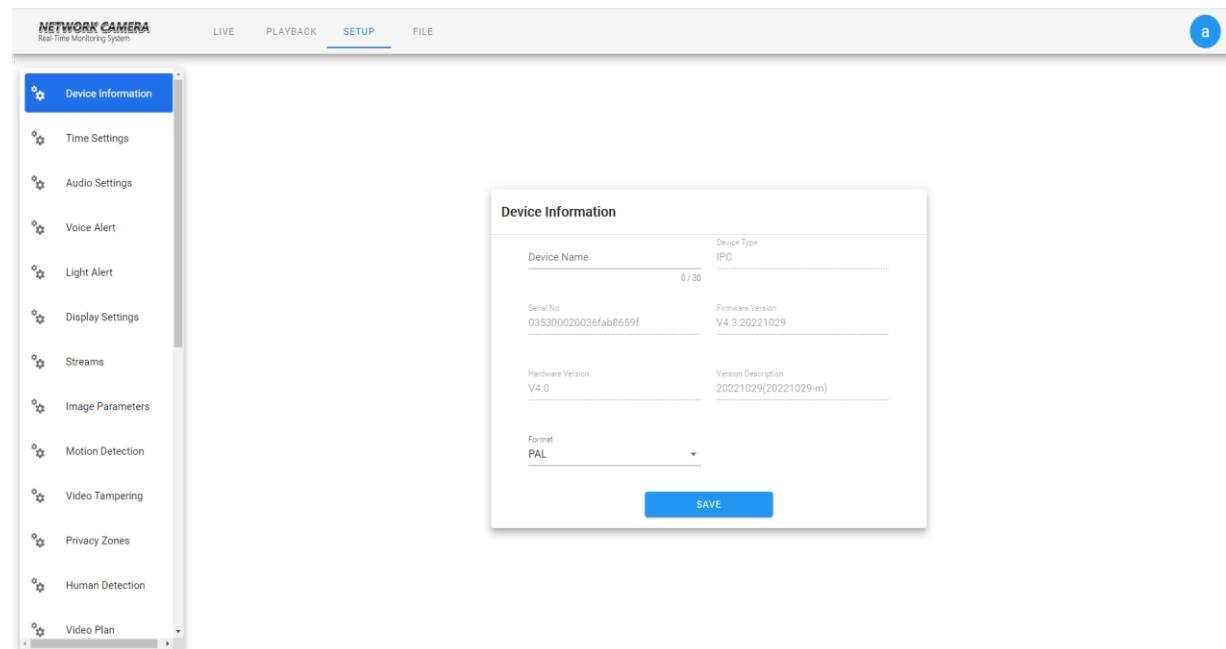

Sound : The sound in the video can be turned on/off.

Double click the position of the search bar to play, or click the "Play" button to start playback.

(Note: This function requires the device to support TF card storage.)

Parameter configuration

Note: The device needs to be inserted with a SD card as a full function display interface, otherwise, the device is a simple display interface.

4.1 Device Information

This is a detailed view of the 'Device Information' configuration page. It includes the following fields:

Device Name	XT-M5CAM	X	Device Type	IPC
Serial No	03560002004a2323135f		Firmware Version	V4.3.1.20230809
Hardware Version	V4.0		Version Description	20230809(20221013-m)
Format	NTSC			

A blue 'SAVE' button is located at the bottom right of the form.

Equipment Name: the name of the equipment can be set.

Equipment Type: displays the equipment type.

+965 1880005

www.xontel.com

kuwait@xontel.com

Serial Number: displays the product serial number.

Master version: displays the software program version date.

Hardware Version: Displays the version number of the hardware motherboard.

System: PAL and NTSC image system can be switched.

4.2 Time Settings

Time Settings

TIME SETTINGS	NTP SETTINGS	DST
Device Date 📅 2022-11-8	Device Time ⌚ 17:56:32	
TimeZone GMT+08:00 Beijing		
MANUAL TIMING		SYNC WITH PC TIME

Manual timing: set IPC time manually.

synchronization with PC: synchronize the current PC time.

4.6 Encoding settings

Streams

Stream Type	Main Stream	Video Type	Video
Resolution	2592*1904	Frame Rate	Full Frame
Video Encode	H264	Encode level	HighProfile
I Frame Interval	40	Bitrate Type	Variable
Bitrate	4 Mbps	Quality	Higher

SAVE

Stream compression type: the main stream and sub stream coding types can be selected.

Code stream type: including composite stream and video stream;

Resolution: The front-end IPC supports several resolutions, and the corresponding ones will be displayed here.

Video frame rate: different values can be selected from the drop-down list. The default value is Full Frame Rate.

Code type: including H264/H265;

Code Level: you can select a code level, including Baseline, MainProfile, and HighProfile.

I frame interval: I frame interval can be set.

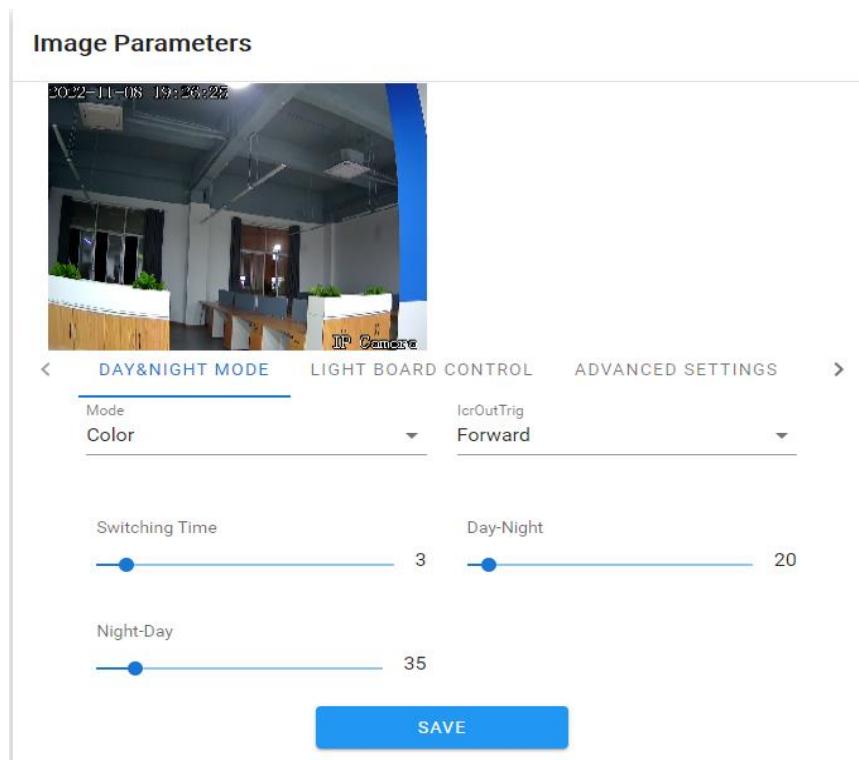

Bit rate type: including fixed rate and variable rate.

Bit rate: different bit rates can be set for different channels.

Image quality: six types can be selected: best/sub good/good/average/poor/worst.

4.7 Image Parameters

Day night switch: divided into external trigger, automatic, color, black and white. The day and night switching mode of non-infrared network model is automatic by default, and the day and night mode of infrared network model is external trigger by default. The user selects the day and night switching mode according to the network machine model and the actual use scenario;

Color mode: divided into three types: standard, gorgeous and natural; The color mode defaults to standard;

IRCUT trigger: it is divided into forward/reverse, which is related to the actual IRCUT hardware;

Switching time: the day night switching delay value (0-30) is 3 seconds by default;

Day night switching threshold: the default value is 20, and the threshold range is 0-255. The value can be adjusted according to customer needs;

Night day switching threshold: the default value is 35, and the threshold range is 0-255. The value can be adjusted according to customer needs;

Fill light setting: light mode, switching mode and light brightness can be set.

Advanced settings: you can set image mode, wide dynamic mode, 3D time domain. sharpness, defogging function, night frame reduction, and white balance.

Exposure control: backlight mode, exposure allocation strategy, gain control, shutter and infrared light receiving can be set.

GAMMA: GAMMA value and power frequency can be set.

4.8 Motion Detection

Motion Detection

SETUP ARMING SCHEDULE LINKAGE SETTING

Enable Sensitivity

Area settings:

26:29 - 11:08 | 18:32:03

IP Camera

CLEAR **SAVE**

Parameter setting: you can set whether to enable the detection function, set the detection sensitivity, and set the detection area.

Deployment Time: you can set the deployment time from Monday to Sunday.

Linkage setting: you can set the linkage to upload email, video, FTP, alarm light, alarm output, capture, and voice broadcast.

+965 1880005

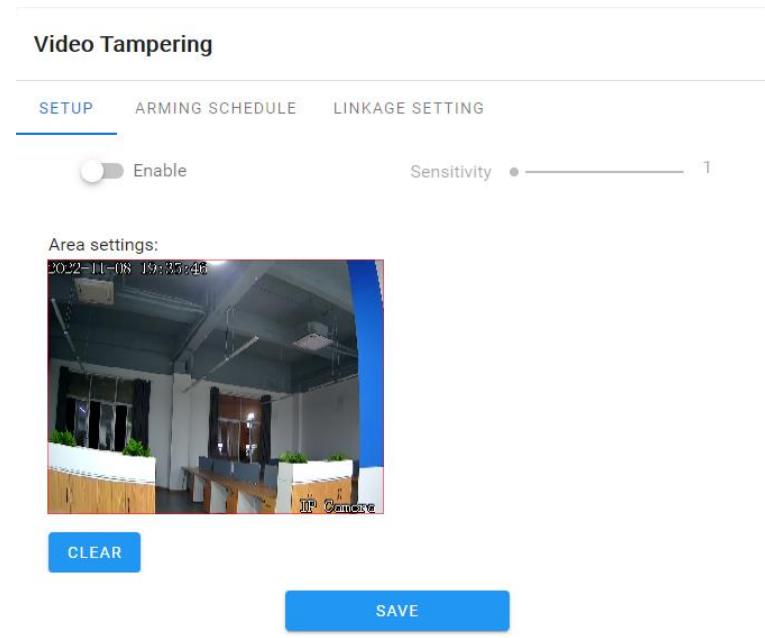

www.xontel.com

kuwait@xontel.com

4.9 Video Tampering

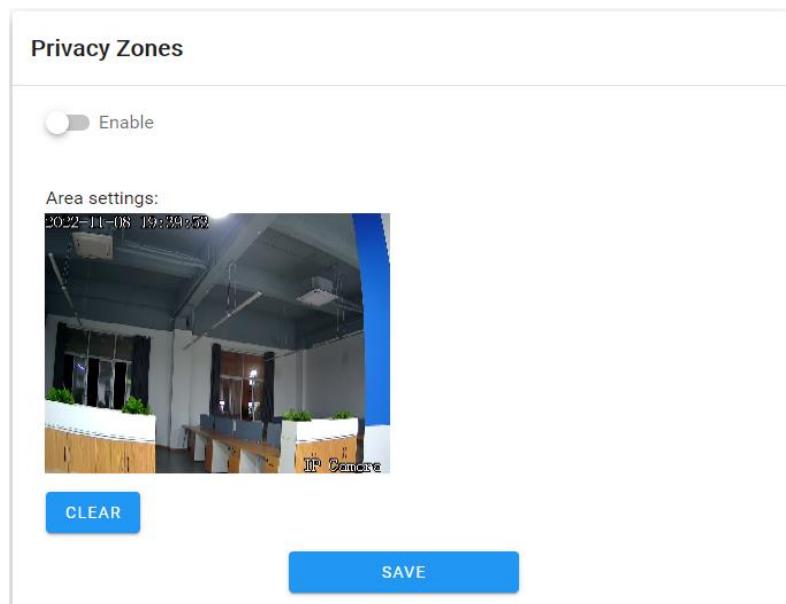

Parameter configuration: you can set whether to enable the detection function, set the detection sensitivity, and set the detection area.

Deployment Time: you can set the deployment time from Monday to Sunday.

Linkage setting: you can set the linkage to upload email, video, FTP, alarm light, alarm output, capture, and voice broadcast.

4.10 Privacy Zones

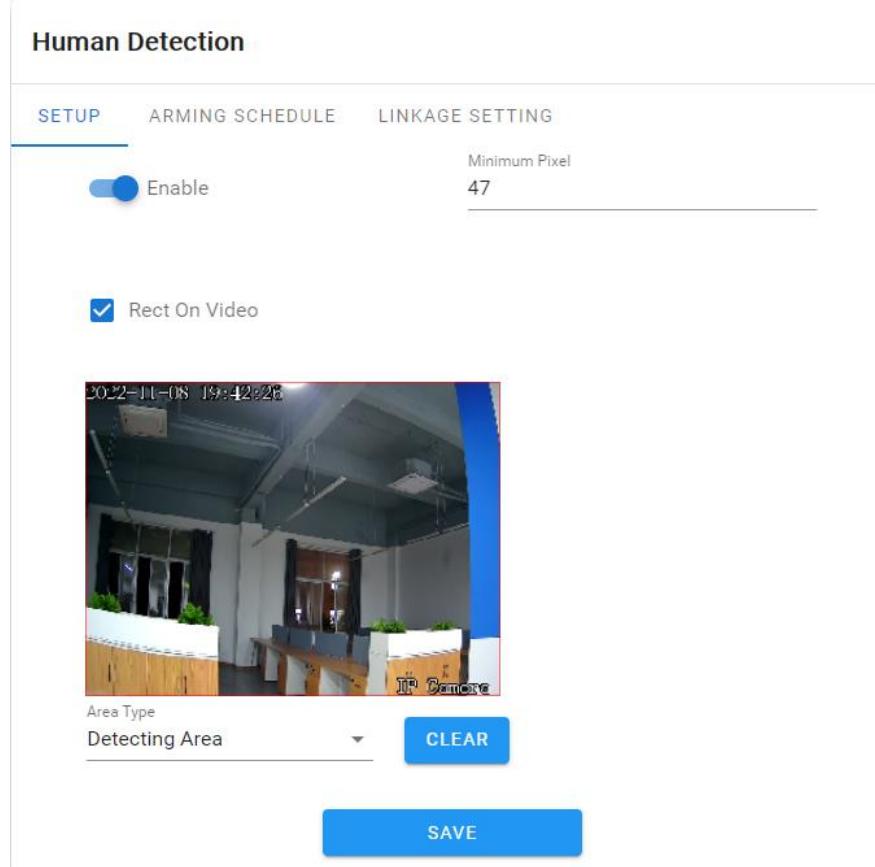

Enable: privacy masking can be enabled or disabled.

Setting area: In the preview interface of Setting Area, press and hold the left mouse button and drag to select the area to be masked.

Clear: click "Clear" to clear the area specified by IPC.

4.11 Human Detection

Parameter setting: you can set whether to enable the human shape detection function; The minimum human shape pixel size can be set to be the minimum human shape pixel size detected; The video stream can be superposed to the human frame; Detection area and shielding area can be set.

deployment Time: you can set the deployment time from Monday to Sunday;

Linkage area: linkage upload email, video, FTP, alarm light, alarm output, capture and voice broadcast can be set.

4.12 Video Plan

Video Plan

SETUP	ARMING SCHEDULE
Video Mode	Time recording+Alarm recording
Pre Record	No PreRecorded
Post Record	1min
SAVE	

Parameter configuration: video recording mode, pre-recording time and video recording delay can be set.
